Signal Processing 17 (1989) 393–394
Elsevier Science Publishers B.V.

AUTHOR INDEX VOLUME 17

(The issue number is given in front of the page numbers)

Al-Kindi, M.J. and **J. Dunlop,** Improved adaptive noise cancellation in the presence of signal leakage on the noise reference channel (3) 241–250
Antweiler, M., *see* **H.D. Lüke** (1) 69–80
Arnold, L., Interpolative coding of imaging with temporally increasing resolution (2) 151–160
Astola, J. and **Y. Neuvo,** Optimal median type filters for exponential noise distributions (2) 95–104

Baskurt, A., R. Prost and **R. Goutte,** Iterative constrained restoration of DCT-compressed images (3) 201–211
Bellanger, M.G., The FLS–QR algorithm for adaptive filtering (4) 291–304
Bömer, L., *see* **H.D. Lüke** (1) 69–80
Butzer, P.L. and **G. Hinsen,** Reconstruction of bounded signals from pseudo-periodic irregularly spaced samples (1) 1–17

Caroubalos, C., *see* **S. Karaboyas** (4) 321–341

Dante, H.M., On the adaptive interpolation of discrete-time signals (4) 305–311
Dimolitsas, S., An adaptive IIR filter based on the Hurwitz stability properties and a Chebychev system function approximation (1) 39–50
Dinstein, I., G. Guy, J. Rabany, J. Tzelgov and **A. Henik,** On the compression of stereo images: Preliminary results (4) 373–382
Dodson, M.M. and **A.M. Silva,** An algorithm for optimal regular sampling (2) 169–174
Dunlop, J., *see* **M.J. Al-Kindi** (3) 241–250

Eden, M., *see* **M. Unser** (3) 191–200

Fahmy, M.M., *see* **R. Zarour** (2) 175–182

Goutte, R., *see* **A. Baskurt** (3) 201–211
Gulli, C., Analogy between the chi-squared density function and the impulse response of a fractional system (2) 129–140
Guy, G., *see* **I. Dinstein** (4) 373–382

Hamblen, J.O., *see* **A. Parker** (2) 119–127
Henik, A., *see* **I. Dinstein** (4) 373–382
Hinsen, G., *see* **P.L. Butzer** (1) 1–17

Kalouptsidis, N., *see* **S. Karaboyas** (4) 321–341
Karaboyas, S., N. Kalouptsidis and **C. Caroubalos,** An efficient method for multipath channel equalization (4) 321–341
Karlsson, G. and **M. Vetterli,** Extension of finite length signals for sub-band coding (2) 161–168
Katayama, T., *see* **M. Tanaka** (3) 213–226
Ko, C.C., Nulling performance of a broadband linearly constrained array (4) 313–320
Krishna, H. and **Y. Wang,** On fast algorithm for testing the stability of discrete time systems (3) 251–257
Kwon, B.H. and **S.U. Pillai,** A self inversive array processing scheme for angle-of-arrival estimation (3) 259–277

Lantz, E., Subpixel signal centering and shift measurement using a recursive spectral phase algorithm (4) 365–372
Liu, X., *see* **M. Zou** (1) 57–67
Lüke, H.D., L. Bömer and **M. Antweiler,** Perfect binary arrays (1) 69–80

Madhu Murthy, K.V. and **B. Yegnanarayana,** Effectiveness of representation of signals through group delay functions (2) 141–150
Majoor, G.M.M., *see* **J.B.O.S. Martens** (4) 353–364
Marquis, D.A., *see* **J.P. Noonan** (1) 81–85
Martens, J.B.O.S. and **G.M.M. Majoor,** The perceptual relevance of scale-space image coding (4) 353–364
Mertzios, B.G. and **A.N. Venetsanopoulos,** Minimum cycle fast implementation of two-dimensional digital filters based on the LU decomposition (3) 227–239

Nagel, P., A transform method for designing digital filters with equiripple or maximally flat behaviour in both magnitude and phase response (4) 343–352
Neuvo, Y., *see* **J. Astola** (2) 95–104
Noonan, J.P. and **D.A. Marquis,** New algorithm for the design of linear phase FIR filters with +1, −1 and 0 coefficients (1) 81–85

Pal, R.N., *see* **R.V. Raja Kumar** (2) 105–118
Parker, A. and **J.O. Hamblen,** Optimality equations for an all-pole model with multiple excitation (2) 119–127
Pillai, S.U., *see* **B.H. Kwon** (3) 259–277
Prost, R., *see* **A. Baskurt** (3) 201–211

Rabany, J., *see* **I. Dinstein** (4) 373–382
Raja Kumar, R.V. and **R.N. Pal,** Performance analysis of the recursive center-frequency adaptive bandpass filters (2) 105–118

Sarkar, T.K. and **X. Yang,** Application of the conjugate gradient and steepest descent for computing the eigenvalues of an operator (1) 31–38
Schroeder, J. and **R. Yarlagadda,** Linear predictive spectral estimation via the L_1 norm (1) 19–29
Silva, A.M., *see* **M.M. Dodson** (2) 169–174
Söderström, T., *see* **P. Stoica** (4) 383–387
Stoica, P. and **T. Söderström,** On reparametrization of loss functions used in estimation and the invariance principle (4) 383–387

Tanaka, M. and **T. Katayama,** Edge detection and restoration of noisy images by the expectation–maximization algorithm (3) 213–226
Trus, B.L., *see* **M. Unser** (3) 191–200
Tzelgov, J., *see* **I. Dinstein** (4) 373–382

Unser, M., B.L. Trus and **M. Eden,** Iterative restoration of noisy elastically distorted periodic images (3) 191–200

Venetsanopoulos, A.N., *see* **B.G. Mertzios** (3) 227–239
Vetterli, M., *see* **G. Karlsson** (2) 161–168

Wang, Y., *see* **H. Krishna** (3) 251–257

Yang, X., *see* **T.K. Sarkar** (1) 31–38
Yarlagadda, R., *see* **J. Schroeder** (1) 19–29
Yegnanarayana, B., *see* **K.V. Madhu Murthy** (2) 141–150

Zarour, R. and **M.M. Fahmy,** A design technique for variable two-dimensional recursive digital filters (2) 175–182
Zou, M. and **X. Liu,** Design and implementation of circularly and spherically symmetric multidimensional digital filters (1) 51–67
